Technical Assistance Service and Know How

Our staff members are at your side, providing advice and support. Problems are viewed as challenges waiting to be solved by a team of technologists, laboratory engineers and service technicians.

SERVICES

- Assembly
- Inspections
- Maintenance
- Revisions
- Start of operation
- Leak tests
- High Efficiency Cleaning (HEC)

BENEFITS

- ✓ Experience with nearly all OEM filter systems
- ✓ Fast and efficient performance = short downtimes
- ✓ Rapid reaction by a local Service Team (TASK), spare parts and technical support
- ✓ Efficient project management of filter cages, filter bags and assemblies by a single contact person

NOTHING REPLACES EXPERIENCE.

TASK[®] has been performing assemblies in dust collectors for 40 years. We work with precision. Experienced teams, on single or multiple shifts, ensure fast and clean operational readiness of your installation. So you have time for your job.

RELIABILITY, QUALITY AND FLEXIBILITY

We perform all services on schedule, whether assembly of filter elements, inspections or revisions. Even with a short lead-time, we are capable of performing comprehensive tasks fast and reliably.

CLEANLINESS

There is a threshold limit value for flue gases. Then why not curb diffuse emission sources during filter bag replacement? We provide a nearly emission-free option of filter bag exchange under an assembly tent or by means of "FilterFix", a tubular foil mount.

OCCUPATIONAL SAFETY

Anything is possible? Not quite! We make no compromises regarding the occupational safety of our staff members. Our service department is SCC** certified. Every staff member has a personal SCC certificate and regularly participates in safety training.
